

SPRING QUARTER 2020

FUNDAMENTALS OF GLOBAL CYBERSECURITY

JSIS 478E: SLN 15570 | 578E: SLN 15602 | 5 CR
M/W 1:30–3:20, SIG 228

Instructor: Jessica L. Beyer | jlbeyer@uw.edu
Lecturer, Henry M. Jackson School of International Studies

This course addresses the impact of nation-state cybersecurity strategy on global security. Nation-states make strategic cybersecurity decisions about whether to create cyber-weaponry, develop hacking forces, encourage patriotic hackers, shelter cyber-criminals, or even invest in technology education. Likewise, at the international level, geopolitical fissures continue to frustrate efforts to create international agreements around cyberattacks and cyberwar. This course will focus on specific world regions including East Asia, Middle East, South Asia, Southeast Asia, Russia, and Europe.

Funded by the following US Department of Education National Resource Centers at the Henry M. Jackson School of International Studies: East Asia Center, Center for Global Studies, Middle East Center, South Asia Center, and Southeast Asia Center
